DETAILED ACTION

Election/Restrictions

1. Applicant's election of claims 20-22 in the reply filed on 11/03/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 1713

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lok et al., U.S. Patent No. 4,440,871 (hereinafter "Lok") in view of Davis, EP 0 463 793 A2 (hereinafter "Davis"). Lok teaches a silicoaluminophosphate composition and template. See Lok, Summary of Invention. The present invention differs from Lok in that the present invention requires a polymeric base. Davis teaches in analogous art a crystalline aluminophosphate mixed with silicon and employed in olefin polymerization. See Davis, page 6, lines 23-26. In view of Davis, one having an ordinary skill in the art would be motivated to modify Lok by using silicoaluminophosphate composition and template in a polymer (oligomer). Such modification would be obvious because one would expect that the use of silicoaluminophosphate composition and template as taught by Lok would be similarly useful and applicable to the composition taught in Davis.
